Integrity Flags

0 Integrity Flags for Review

Our system's algorithms look deeply at a document for any inconsistencies that would set it apart from a normal submission. If we notice something strange, we flag it for you to review.

A Flag is not necessarily an indicator of a problem. However, we'd recommend you focus your attention there for further review.

Report

2024-25 Autumn

Student Name: Anupam Sigdel

London Met ID: 22067426

College ID: NP01MM4A220102

Assignment Due Date: Thursday, March 20, 2025

Assignment Submission Date: Thursday, March 20, 2025

Word Count: 2368

I confirm that I understand my coursework needs to be submitted online via MySecondTeacher under the relevant module page before the deadline in order for my assignment to be accepted and marked. I am fully aware that late submissions will be treated as non-submission and a marks of zero will be awarded.

Introduction

1.1 Topic

Topic of the project is Corporate Crossfire

1.2 Area of Research

The research topics were on the following topics

3d Environment Design

Modeling and Texturing Techniques

Software tools and workflow

Optimization

Aims of Project

  The aim of the project is to create a 3d environment that showcase my skill in modelling, texturing and rendering while taking care of the poly count. Through the development and design of the realistic 3d environment the project seeks to evolve creativity encouraging others to appreciate 3d art. It will serve as a portfolio piece while also promoting the idea of creative expression with the help of 3d design.

Target Audience

Interest: competitive gamers who enjoy the skill-based game.

Age: There will be some violent element like gun 16 – 35 ages.

Gender: mostly targeted towards males but females can play it too.

Geography: all around the globe because the concept will be familiar and as it is inspired from well-known game.

User experience: Players can feel really connected as the game will require a lot of focus and strategy and teamwork. Player can also feel some challenge as they will be playing against other real human with almost same amount of experience

Product Research

For the start of the project, I looked at this video and it gave me a rough idea for the environment modelling phase.

 Figure 1: Youtube link 1

Youtube link: <https://www.youtube.com/watch?v=RaNUmKgbNss>

I watched this video for understanding the basic of optimization of model.

The video focuses on blender, but I used the same principle for maya.

 Figure 2: Youtube link 2

Youtube link: <https://www.youtube.com/watch?v=jFE6KhNKg8A&t=89s>

This is another video I watched on the optimization of the model in blender and applied the same concept for maya.

  Figure 3: Youtube link 

Youtube link: <https://www.youtube.com/watch?v=EJ9CqcO2BVI>

Technologies Employed

Maya: For the modelling and final render of the environment.

Substance Painter: For the texturing of model and environment.

Premiere pro: for creating the video after combining all the image sequences.

Project Plan

6.1 Preproduction Stage

Pre-Production

Initial ideas concept

The initial concept of the project was to design a semi realistic 3d game environment made for the strategic combat which was inspired from the game like counter strike and call of duty. These games offer a very different kind of experience than other game of same genre. The goal was to fuse all these characteristics and make an environment for the game. This direction of concept set the tone for the remainder of the project, making sure all the design choices from layout to the lighting- supported a unified gameplay experience. The setting would incorporate elements such as hallways and rooms including other things such as ward board, tables and barriers and interior room. Ultimately the concept aimed to combine real world believability with engaging gameplay flow, giving players both tactical options and visual interest throughout the map.

Mood board

This mood board shows a clean, modern corporate setting for a tactical FPS game. It includes eight images of office buildings, quiet lobbies, stairwells, and boardrooms. The colors are mostly gray, blue, and neutral tones, giving everything a sleek and serious look. There are no people in the scenes, which makes the spaces feel calm but a little tense like something could happen at any moment. The buildings have a sharp, professional design that feels organized and high-tech. Overall, it sets the mood for action in a place that looks controlled on the outside but could turn dangerous fast. Color palette leaned toward more dark and grey tones to sort of show the ambience of the war. These boards were very important while modeling and texturing as they helped to create consistency in the overall scenes of the project. Mood board played a very crucial role in the overall making of the project

Figure 102: Texturing of Chair 3

Postproduction

Render of the Environment

For the final output of the project, I decided to render the environment in HD with resolution of 1920 x1080 with the using of the Arnold render engine which is a plugin for maya. I chose this resolution because its full HD which means its clear enough to show all the detail which is present in the scene including all the shadows and texture. The face count of the scene is very low as it is a game environment which I think is very important. I tried to keep things low poly as possible, and I relied more on the texturing part and use of maps such as bump and normal maps. The render took quite a time. All of the rendered image and video can be found inside the file

Resources

Softwares to be used

Maya

Maya used for modelling, texturing, and render

Substance Painter

Used for texturing

Premiere Pro

Used for compiling image sequence for creating final video

Survey results

It was said that the survey form would be taken to see the effective of the final product.

There were 15 questions, name and email address are not revealed in the documentation, but they were asked for any follow up questions. The video link was in the form itself.

12 Survey Link:

<https://docs.google.com/forms/d/e/1FAIpQLSdkkAZMsknY6krVJvUKPAjQlwKzDL1V7e41RweXdPJMATvADg/viewform>

Reflection on the Survey

Looking at the survey results, its clear that the project was generally liked. Most people thought the layout and lighting and texture were done well. However, some responses pointed out areas that could be improved.

Some of the review showed that few people did not find out the environment didn't feel fully immersed. It was also interesting to see while some of the people were curious and engaged some people remained neutral about whether they liked the scenes or not.

Overall the feedback was a valuable remainder that even strong work can benefit from further refinement. It gives me a clearer direction for how to improve on the future project.

Conclusion

. Weekly logs
